

# Project Initiation Instructions

Bobby Dominy

2023-04-06

## Initiating a New Project

1. Create a new repo on Github
2. Clone github repo in rStudio using

```
usethis::create_from_github("url-copied-from-github",  
                             destdir = "file-path-to-directory-that-will-house-repo/")
```

3. Generate filing system structure via `cabinets`, using `here()` to reference the parent directory.

```
usethis::create_from_github("url-copied-from-github",  
                             destdir = "file-path-to-directory-that-will-house-repo/")
```

4. Create project-specific library source using `groundhog`.

```
usethis::create_from_github("url-copied-from-github",  
                             destdir = "file-path-to-directory-that-will-house-repo/")
```

5. Create project-specific functions file.
6. Implement Analysis
7. Resolve conflicts in project-specific functions file, push to github.
